Subject: Question from FEMA DRC
Date: Wednesday, September 13, 2017 9:19:05 AM

We received a question from the FEMA Simonton DRC in Fort Bend County that we are trying to get resolved so that we can pass the information along. I am going to word it as they presented it to us.

If there are multiple water wells pulling from the same groundwater source, is it necessary for everyone pulling from the same source to, each individually, disinfect their wells before anyone can use their individual wells. Or, can an individual well once disinfected, be used, without everyone else on the same source disinfecting their individual wells also.

Thanks,

Jeremy Deyoe
